

ENVIRONMENTAL POLICY STATEMENT

It is the company's policy to consider the environmental implications of all activities on and or associated with all contracts undertaken to ensure compliance with environmental legislation and codes of practice.

To achieve these objectives initial dialogue takes place with the relevant people involved so that the potential environmental impact of our activities can be assessed.

Once assessed methods of working are developed which, where practical, protect the environment and make efficient use of natural resources from renewable sources.

Matters, which receive particular attention, include material acquisition, material distribution, waste management, pollution control and noise.

We endeavour to minimise the use of non-renewable resources and to use energy efficient, recycled and non toxic products. The environmental advantages of different fuels for our vehicles are considered, including the sharing of vehicles where practicable.

All staff are encouraged to be aware and mindful of environmental issues and the part they can play.

This policy statement and the arrangements for achieving our environmental objectives are reviewed at least annually to ensure that the company is continually improving and keeping abreast of developments in environmental management.

Signed:

Paul Oldridge- Director
